

Standard Stereo Common Modes

Eight standard modes of operation have been defined for stereo operations. The A channel runs either normal_scan or fast_scan, whilst the B channel runs one of 4 standardised discretionary modes, either at 3 or 7 seconds integration.

MODE	ChA	CPID	ChB	CPID	Intt	Finland	Iceland
cts2	normal_scan	152	tbj mode	-26002	7		
cts4	normal_scan	152	normal_scan	-26004	7		
cts6	normal_scan	152	single camp beam	-26006	7	9	5
cts8	normal_scan	152	2 camp beams	-26008	7	5, 9	5, 9
cts3	fast_scan	153	tbj mode	-26003	3		
cts5	fast_scan	153	normal_scan	-26005	3		
cts7	fast_scan	153	single camp beam	-26007	3	9	5
cts9	fast_scan	153	2 camp beams	-26009	3	5, 9	5, 9

Even numbered modes synchronize on 2 minute boundaries, odd numbered modes on 1 minute boundaries.

Corrected 30/6/2008: cts1 corrected to cts3, cts3 corrected to cts5
